

ProWall® Missile Shipping Containers

ProWall® positively addresses corrosion abatement as part of the "cost of ownership" and can neutralize inclement environments common to shipboard storage, such as the combination of salt air, heat and humidity, ensuring assets are not labor intensive to maintain, i.e. painting, corrosion, and weathering.

Intec's latest container has been engineered for military missile transportation. The containers are hermetically sealed units with provisions to have controlled atmospheric conditions.

Additionally, Intec has designed this material and manufacturing process to comply with the Army environmental initiative "Army Green" to reduce hazardous materials and emissions. ProWall® containers are considered non-hazardous waste and are recyclable.
